

## PROFESSIONAL SUMMARY

Software Engineering student with hands-on, end-to-end experience building and deploying 5+ live full-stack web applications across fintech, agri-tech, and operations management domains. Proficient in data structures, algorithms, REST API development, and OOP principles. Secured 2nd place in a state-level cybersecurity hackathon for an AI-powered deepfake detection system. Aiming to contribute strong problem-solving skills and real-world engineering experience to an SDE Intern role.

## TECHNICAL SKILLS

- Languages: Python, Java, SQL, JavaScript
- Frontend: React.js, HTML, CSS, React Native
- Backend: Node.js, Express.js, Flask, Spring Boot
- Databases: SQL, MySQL, Supabase, MongoDB
- CS Fundamentals: Data Structures, Algorithms, OOP, Unit Testing, Version Control (Git)
- AI/ML: Machine Learning, LangChain, OpenAI, Roboflow
- Tools & Cloud: GitHub, REST APIs, Cloudflare, VPS Hosting
- Concepts: API Integration, Authentication, Deployment, ERP Systems
- Soft Skills: Problem Solving, Team Collaboration, Agile Workflow, Communication, Self-Learning

## WORK EXPERIENCE

### Web Developer Intern — Gradix Technologies | Mar 2026 – Jun 2026

- Built responsive React interfaces for 3+ internal applications, improving UI consistency across the product
- Developed and documented REST APIs using Express.js, reducing third-party integration time by ~30%
- Optimized frontend rendering and backend query performance, cutting average page load time by 25%
- Collaborated in a 4-member Agile team using Git, participating in sprint reviews and code reviews

## EDUCATION

### Bachelor of Technology in Artificial Intelligence and Data Science

Sep 2023 - Present

- K.S.Rangasamy College of Technology CGPA: 8.16/10

## PROJECTS

### • DAKSHAA T26 — Full-Stack Event Management Portal | Jan 2026 – Feb 2026

Created a full-stack portal for a national symposium, supporting 3000+ attendees. connected Supabase for database management and authentication; embedded a college payment gateway enabling smooth online registration and transactions. Deployed frontend on Cloudflare and backend on a VPS server.— <https://dakshaa.ksrct.ac.in>

### • TrueSight AI — Deepfake Detection System | Nov 2025 – Dec 2025

Engineered a multimodal deepfake detector (video + audio) with Roboflow models and a Flask API. Generated structured forensic reports for 10+ evidence types and designed an investigation-centric workflow aligned with cybercrime operational needs. Presented to the Namakkal Cyber Cell for potential pilot rollout across the district.-- [https://github.com/Vikasthangavel/true\\_sight\\_AI.git](https://github.com/Vikasthangavel/true_sight_AI.git)

### • Time2Due — Operations Management Platform | Sep 2025 – Dec 2025

Built a web platform for cable operators to manage 100+ employees, track offline payments, and generate secure role-based reports. Reduced manual reporting effort by 60% by digitizing billing and attendance workflows across the operations management domain.. — <http://165.99.52.33:5005>

### • Time2Order — Preorder Management System | Aug 2025 – Nov 2025

Architected an app-based preorder platform that reduced customer wait times by ~40% and streamlined peak-hour crowd flow for 10+ local shops. Implemented backend logic in Python/SQL and embedded the Cashfree Payment API to handle secure digital transactions. — <https://time2orders.com>

### • Time2Farm — Farmer AI Assistant | Apr 2025 – Jul 2025

Built an agri-tech financial management platform enabling 50+ farmers to track section-wise income, expenses, and profit across multiple farm divisions. Connected the Gemini API to deliver AI-driven insights, reducing manual bookkeeping effort by 70%.— <https://time2farm.pages.dev>

## ACHIEVEMENT

- Secured 2nd Place in the Namakkal Police Cybersecurity Hackathon 2025 (state-level) for developing an AI-based cybercrime detection solution.
